Introduction to Programming

with Java

Class: Statistics.java

Score: ⭐ ⭐ (Easy)

Description:

Implement a program that creates and fills **NxN** matrix with random integer values then computes mean and standard deviation of the matrix.

Note that **N** is taken from the user and random integer values should be in range [0, 50)

Sample Run:

```
Enter size of the table: 5

Table content
46    31    13    14    17
31    13    23    18    13
21    37    41    48    36
31    7     3     0     25
37    35    7     26    49

mean = 24.88
stdev = 13.946526449263272
```
