Introduction to Programming

with Java

Class: **UniqueElements.java**

Score: ⭐ ⭐ (Easy)

Description:

Write a program that creates an array with random numbers and remove the duplicate values in the array then prints the resulting array. Size of the array *arraySize* is taken from the user.

Note that your program should fill the all elements of array with random numbers in range [0-10].

Sample Run:

```
This program generates two arrays and merges them.

Enter how many random numbers to generate: 7

Main Array Elements:

[ 8 8 9 3 2 3 8 ]

Unique Elements:

[ 2 3 8 9 ]
```
